

Milestone 5 — UAT Guide

Scope: Schedule / Calendar, Appointments, Inspection, Documents & E-Signature on the Flutter mobile app.

Time: ~30 min for a full pass.

Build: Online only. Offline support is deferred to a follow-up milestone.

Setup

- Android phone with the latest UAT build installed.
- Test homeowner phone (any device) — only needed to receive the signed-PDF link.
- Tenant should already have:
 - One **prospect** with a roof address and primary phone.
 - One **confirmed appointment** today, assigned to the rufero account below.
 - One **unsigned document** generated and **company-signed on the web** for that prospect.

Accounts

Role	Email
Rufero (field inspector)	rufero@gmail.com
Telefonista	telefonista@gmail.com
Owner / Admin	ashenafigodanaj@gmail.com

Passwords are shared separately. Sign in as **Rufero** for everything below unless noted.

Deferred / Accepted (please initial)

1. Offline mode is OFF — the app surfaces network errors normally; writes are not yet queued for later sync.
 2. Ad-hoc / walk-in inspection (starting without a pre-booked appointment) is hidden in this build.
 3. Push notifications for new / changed appointments are not part of M5.
 4. iOS build is not provided in this UAT cycle.
 5. Homeowner SMS reply on mobile is deferred.
-

1. Authentication

#	What to verify	Pass	Fail	Notes
1.1	Sign in with the rufero account succeeds and lands on the main app shell.	☐	☐	
1.2	Sign out from the avatar menu returns to the login screen.	☐	☐	
1.3	Theme toggle switches the whole app between light and dark cleanly.	☐	☐	

2. Schedule — viewing the calendar

#	What to verify	Pass	Fail	Notes
2.1	The Schedule tab shows the rufero's appointments and availability blocks.	☐	☐	
2.2	Day, Week, and Month views all render correctly and show the same data.	☐	☐	
2.3	A separate List view groups upcoming appointments by day.	☐	☐	
2.4	Switching between Calendar and List does not lose or duplicate any events.	☐	☐	

3. Availability management

#	What to verify	Pass	Fail	Notes
3.1	The rufero can create a one-off busy block (e.g. lunch).	☐	☐	
3.2	The rufero can create a recurring working / busy block (e.g. every Monday).	☐	☐	
3.3	Existing blocks can be edited and deleted, and changes reflect in all calendar views.	☐	☐	
3.4	Default working hours per day can be saved and reload correctly.	☐	☐	

4. Appointment management

#	What to verify	Pass	Fail	Notes
4.1	Tapping an appointment from any surface (Day, Week, List, or prospect detail) opens the same action sheet.	☐	☐	
4.2	A confirmed appointment exposes three actions: Start Inspection, Mark complete, No-show.	☐	☐	
4.3	Mark complete requires explicit confirmation and updates the status without a manual refresh.	☐	☐	
4.4	No-show requires a written reason and stores it on the appointment.	☐	☐	
4.5	Terminal appointments (completed / canceled / no-show) show "no further actions" instead of buttons.	☐	☐	

5. Inspection capture

#	What to verify	Pass	Fail	Notes
5.1	Photos can be added from camera and from gallery , and appear in the inspection grid.	☐	☐	
5.2	Each photo can be tagged (Overview, Close-up damage, etc.) and the tag can be changed later.	☐	☐	
5.3	Photos can be opened full-screen and deleted.	☐	☐	
5.4	The damage form captures roof age, material, storm date, affected areas, severity, and notes.	☐	☐	
5.5	The form autosaves : backing out and reopening preserves all entered values.	☐	☐	
5.6	Attempting Save & Continue with missing required fields surfaces clear errors and blocks the save.	☐	☐	
5.7	A complete inspection (required fields + ≥3 photos with Overview + Close-up damage tags) saves and proceeds to the document preview.	☐	☐	

6. E-signature

#	What to verify	Pass	Fail	Notes
6.1	The document preview displays the correct status: Ready to sign, Company signed · homeowner pending, Already signed, or Not generated.	☐	☐	
6.2	The unsigned PDF can be opened and reviewed before signing.	☐	☐	
6.3	The signature pad accepts the homeowner's name and a drawn signature.	☐	☐	
6.4	After signing, the user sees a success confirmation and the document state flips to Already signed.	☐	☐	
6.5	The fully signed PDF can be opened and shows both the company and homeowner signatures embedded.	☐	☐	

7. Document management

#	What to verify	Pass	Fail	Notes
7.1	The bottom-nav Documents tab shows two sections: Needs signature and All documents .	☐	☐	
7.2	Each document card shows the prospect name, document type, creation date, and a status indicator.	☐	☐	
7.3	Tapping a card opens that exact document (not the latest one for the prospect).	☐	☐	
7.4	The list refreshes automatically when the tab is re-opened after a sign action elsewhere.	☐	☐	
7.5	A per-prospect Documents tab on the prospect detail page shows the same documents and actions.	☐	☐	

8. Prospect detail

#	What to verify	Pass	Fail	Notes
8.1	Prospects can be browsed in both list and map views.	☐	☐	
8.2	The detail page exposes tabs for Profile, Appointments, Documents, Inspections, and Notes.	☐	☐	
8.3	The Appointments tab lists upcoming and past appointments for that prospect, with the same actions as the schedule.	☐	☐	
8.4	The Inspections tab lists past and in-progress inspections for that prospect, newest first.	☐	☐	

9. End-to-end workflow

A single continuous run, with signal, validating the headline flow.

1. Sign in as the rufero.
2. Open today's first appointment from the schedule.
3. Start the inspection, take ≥ 4 photos with Overview + Close-up damage tags.
4. Fill the damage form completely.
5. Save & Continue → on the preview page, sign as the homeowner.
6. Confirm the success message and the document flipping to **Already signed**.
7. Open the signed PDF and confirm both signatures are present.
8. Return to the appointment and **Mark complete**.
9. Verify in the Documents inbox that the doc has moved to **All documents · Signed**.
10. Verify in the Schedule that the appointment is now **Completed**.
